

Brain Injury Specialty Program

The Inpatient Brain Injury Specialty Program at California Pacific Regional Rehabilitation Center delivers a coordinated, outcome driven approach to inpatient acute rehabilitation. Each comprehensive and individualized program focuses on the physical, psychological *and* emotional wellbeing of the patient. Our goal is to facilitate the achievement of functional outcomes that lead to community re-integration and re-engagement in personalized, productive, and meaningful activities.

As part of a tertiary medical center, CPRRC can accommodate adult patients (18 years and older) with complex medical needs that may be associated with traumatic and non-traumatic brain injuries. Access to hundreds of in-house specialists permits an uninterrupted continuum of care.

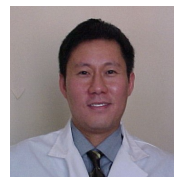

Because of our comprehensive medical management and specialized therapeutic interventions, state of the art technologies, integrative therapy services, and as reflected by our outcomes, we are recognized as an industry innovator and a center of excellence. California Pacific Regional Rehabilitation Center's Inpatient Brain Injury Specialty Program is accredited by the Commission on Accreditation of Rehabilitation Facilities (CARF) and has been serving the needs of the San Francisco Bay Area and beyond for decades.

Program Components

- Comprehensive medical supervision by a board-certified physiatrist
