Appendix: 2019 Community Benefit Financials............................13

Note: This community benefit plan is based on the hospital’s implementation strategy, which is written in accordance with Internal Revenue Service regulations pursuant to the Patient Protection and Affordable Care Act of 2010. This document format has been approved by OSHPD to satisfy the community benefit plan requirements for not-for-profit hospitals under California SB 697.
Introduction

The Implementation Strategy Plan describes how Sutter Lakeside Hospital, a Sutter Health affiliate, and plans to address significant health needs identified in the 2019 Community Health Needs Assessment (CHNA). The document describes how the hospital plans to address identified needs in calendar (tax) years 2019 through 2021.

The 2019 CHNA and the 2019 - 2021 Implementation Strategy Plan were undertaken by the hospital to understand and address community health needs, and in accordance with state law and the Internal Revenue Service (IRS) regulations pursuant to the Patient Protection and Affordable Care Act of 2010.

The Implementation Strategy Plan addresses the significant community health needs described in the CHNA that the hospital plans to address in whole or in part. The hospital reserves the right to amend this Implementation Strategy Plan as circumstances warrant. For example, certain needs may become more pronounced and merit enhancements to the described strategic initiatives. Alternately, other organizations in the community may decide to address certain community health needs, and the hospital may amend its strategies and refocus on other identified significant health needs. Beyond the initiatives and programs described herein, the hospital is addressing some of these needs simply by providing health care to the community, regardless of ability to pay.

Sutter Lakeside Hospital welcomes comments from the public on the 2019 Community Health Needs Assessment and 2019 - 2021 Implementation Strategy Plan. Written comments can be submitted:

- By emailing the Sutter Health System Office Community Benefit department at SHCB@sutterhealth.org;
- Through the mail using the hospital’s address at 5176 Hill Road East, Lakeport CA 95453. Attention to Paige Hotchkiss.
- In-person at the hospital’s Information Desk.

ABOUT SUTTER HEALTH

Sutter Health is nearly 60,000 people strong thanks to its integrated network of clinicians, employees and volunteers. Headquartered in Sacramento, California, Sutter Health provides access to high quality, affordable care for more than 3 million Northern Californians through its network of hospitals, medical foundations, urgent and walk-in care centers, home health and hospice services. Nearly 14,000 doctors and advanced practice clinicians care for Sutter patients.

Recognized as a national leader in quality and access, Sutter’s integrated healthcare system provides access to some of the best medical care in the country that outperforms state and national averages in nearly every quality measure. Through integration, Sutter Health fosters medical innovation and enables care teams to share best practices across the system. This gives patients access to a full range of treatments and services—helping lead to healthier outcomes.

Grounded in its not-for-profit mission, Sutter Health heavily reinvests in its communities, committing hundreds of millions of dollars annually to support programs and organizations that provide healthcare access and services for those in need. From deploying technology that improves the patient experience to supporting strong community partnerships, the strength of Sutter’s integrated system provides a model that can shape the future of healthcare.

Sutter Health’s total investment in community benefit in 2019 was $830 million. This amount includes traditional charity care and unreimbursed costs of providing care to Medi-Cal patients, as well as investments in community health programs to address prioritized health needs as identified by regional community health needs assessments.
• As part of Sutter Health’s commitment to fulfill its not-for-profit status and serve the most vulnerable in its communities, Sutter hospitals, affiliated medical foundations and other healthcare providers offer charity care policies to ensure that patients can access needed medical care regardless of their ability to pay. Sutter’s charity care policies, which have been in place for many years, offer financial assistance to uninsured and underinsured patients earning less than 400 percent of the annually adjusted Federal Poverty Level. In 2019, Sutter Health invested $125 million in charity care, compared to $89 million in 2018.

• Overall, since the implementation of the Affordable Care Act, greater numbers of previously uninsured people now have more access to healthcare coverage through the Medi-Cal and Medicare programs. The payments for patients who are covered by Medi-Cal and Medicare do not cover the full costs of providing care. In 2019, Sutter Health invested $499 million more than the state paid to care for Medi-Cal patients.

• Examples of regional prioritized health needs include access to mental health and addiction care, disease prevention and management, access to basic needs such as housing, jobs and food, as well as increased access to primary care services.

See more about how Sutter Health reinvests into the community by visiting sutterpartners.org.

In addition, every three years, Sutter Health hospitals participate in a comprehensive and collaborative Community Health Needs Assessment, which identifies local health care priorities and guides our community benefit strategies. The assessments help ensure that we invest our community benefit dollars in a way that targets and address real community needs.

For more facts and information visit www.sutterhealth.org.

Through the 2019 Community Health Needs Assessment process the following significant community health needs were identified:

<table>

The 2019 Community Healthy Needs Assessment conducted by Sutter Lakeside Hospital is publicly available at www.sutterhealth.org.

2019 COMMUNITY HEALTH NEEDS ASSESSMENT SUMMARY

The CHNA findings in this report result from the extensive analysis of primary and secondary data sources; over 204 indicators from national and state data sources were included in the secondary analysis and primary data was collected from community leaders, non-health professionals, community based organizations, community members and populations with unmet health needs and/or populations experiencing health disparities. The main source for the secondary data, or data that has been previously collected by the government and other health agencies to inform health planning, is the Hope Rising Lake County platform, a publicly available data platform. That platform can be found here: http://www.hoperisinglc.org. The identified community health needs for Lake County had strong social and economic root causes. The community health needs assessment also describes barriers to
experiencing health and wellness in the community and provides information necessary to all levels of stakeholders to build upon each other’s work in a coordinated, collaborative manner.

The full 2019 Community Health Needs Assessment conducted by Suter Lakeside Hospital is available at www.sutterhealth.org.

DEFINITION OF THE COMMUNITY SERVED BY THE HOSPITAL

Located in north central California, Lake County has a land area of 1,256.46 square miles, about 100 miles long by 50 miles wide, which encompasses 2 cities and 13 census-designated places. The county is predominantly rural and includes Clear Lake, California’s largest natural freshwater lake, known as “The Bass Capital of the West”. The county economy is based largely on tourism and recreation. Lake County is mostly agricultural, with tourist facilities and some light industry. Major crops include pears, walnuts and wine grapes. Dotted with vineyards and wineries, orchards and farm stands, and small towns, the county is also home to Mt. Konocti, which towers over Clear Lake. Many roads are unpaved, unmarked, and unlit, even within blocks of main streets and schools in Clearlake and Lakeport. In addition, few market and store are available which make transportation a necessity for this population (California Department of Public Health, 2017-2018).

In 2018, Lake County’s population had a median age of 45.8 years and a median household income of $40,446 (United States Census Bureau, 2019). In Lake County, 50.2% of the population are female, 5.7% are below 5 years of age, 20.7% are below 18 years and 22.4% are 65 years and above. Among county residents, 10.7% have veteran status. About 15.3% of the people in Lake County speak a non-English language, and 8.7% are foreign born. The median value of owner occupied houses in Lake County is $182,000 and the homeownership rate is 65.9%. The percent of households with a computer is 81.3% and with a broadband internet subscription is 70.6% (United States Census Bureau, 2019). According to data from the National Vital Statistics System (NVSS), the life expectancy in Lake County is 74.5 years on an average, 74.2 for White and 80.2 for Hispanic residents (County Health Rankings and Roadmaps, 2015-2017). With the purpose of jointly addressing health challenges of residents and serving communities with impactful solutions that leverage shared resources and coordinate care, the twelve health agencies that make up the Hope Rising Lake County Collaborative have come together in defining their service area as entire County of Lake. This area includes the following residential ZIP Codes: 95422 (Clearlake), 95423 (Clearlake Oaks), 95426 (Cobb), 95435 (Finley), 95443 (Glenhaven), 95451 (Kelseyville), 95453 (Lakeport), 95457 (Lower Lake), 95458 (Lucerne), 95461 (Middletown), 95464 (Nice), 95467 (Hidden Valley Lake), 95485 (Upper Lake), and 95493 (Witter Springs).

SIGNIFICANT HEALTH NEEDS IDENTIFIED IN THE 2019 CHNA

The following significant health needs were identified in the 2019 CHNA:

1. SUBSTANCE ABUSE AND TOBACCO ADDICTION

Substance abuse refers to the harmful or hazardous use of psychoactive substances, including alcohol and illicit drugs. Psychoactive substance use can lead to dependence after repeated substance use and that typically include a strong desire to take the drug, difficulties in controlling its use, persisting in its use despite harmful consequences, a higher priority given to drug use than to other activities and obligations, increased tolerance, and sometimes a physical withdrawal state (World Health Organization, 2019).

Among all the topics of significant need that were yielded by data scoring, Substance Abuse was the 6th highest scoring topic with a score of 1.91, where 0 indicated the best and 3 indicated the worst outcomes in the county in comparison to other counties in the state.

Primary data also highlighted substance abuse as the most important health challenge in the county. Drug and alcohol abuse were identified as the most important health problem in by 70.9% and 34.3%
community survey participants respectively. Drug use (86.5%), alcohol abuse (64%) and tobacco addiction (20%) were also identified as the most important risky behaviors affecting Lake County. Drug Abuse (including prescription drugs), Alcoholism and Tobacco (including other tobacco products such as snuff, snus, and vapes) among adults and adolescents were identified as the foremost topics of concern for community members and key informants alike. While tobacco addiction was mentioned as an important issue by key informants, drug abuse was the most frequently mentioned health challenge in the county by all community members and key informants interviewed. Drug addiction was stated to affect White communities more while alcoholism was seen more in American Indian tribes and Hispanics, according to the physicians interviewed for this assessment.

2. HOMELESSNESS AND HOUSING STABILITY
Affordable housing and housing stability are important drivers of positive health outcomes. Stable housing is associated with economic stability and quality of life. The primary and secondary data showed that housing was a high priority for Lake County. Section 4.2.4 Housing provides data on housing for Lake County, including the cost of renting. The topic of Housing and Homelessness had a score of 2.28 through data scoring, where a score of 0 reflects the best outcomes and a score of 3 reflects the worst outcomes.

In the community survey conducted, 27.4% participants stated that they had been worried about housing in the past 12 months; 70.88% said they would prefer to see programs in the county that made small grants for repairs and improvements. Approximately 14% survey participants said that costs for housing, food etc. prevented them from seeking healthcare while more than 70% said hospitals should make available resources for social needs such as food and housing. This issue impact quality of life in the community; focus group participants said they felt unsafe and feared the rise in crime and substance abuse in the community was related to homelessness. A consensus, however, was that the community needed to take care of the homeless through temporary shelters and rehabilitation.

California has the highest number of chronically homelessness in the country. Between 2013 and 2017, California has seen 13.3% change in total homelessness (United States Department of Housing and Urban Development, 2017). Per the Homeless Management Information System data of the United States Department of Housing and Urban Development, the one-year estimate of sheltered homeless, between October 2016 and September 2017, was 150,630 households. In Lake County, much like California, housing stability as well as homelessness are both problems. Lake County (27.3%) and the state of California (27.9%) have comparable percentages of people that report sever housing problems.

3. COMMUNITY OUTREACH AND EDUCATION
One of the goals of Healthy People 2020 is to Increase the quality, availability, and effectiveness of educational and community-based programs designed to prevent disease and injury, improve health, and enhance quality of life. In a community, health status and related health behaviors are determined by influences at multiple levels: personal, organizational/institutional, environmental, and policy. Dynamic interactions between these personal, social and environmental factors work to determine an individual’s health as well as the different points of intervention for organizations working in health promotion.

Though community outreach and education were not significant health needs that emerged from either secondary or primary data, there was a strong preference among Hope Rising Lake County partners for increasing health education and promotion efforts for various issues that ailed the county. While health outcomes are dependent on a well-functioning medical system, it was widely acknowledged by all the key informants interviewed that health began in the community and it was important to increase healthy behaviors at an early age. The Hope Rising Lake County partners realize that by intervening in schools through community programs, they could stem harmful behaviors of county residents in the formative years. Some of the issues that Hope Rising Lake County partners expressed an interest in addressing through schools were substance abuse, tobacco use, e-cigarettes, vaping, mental health, physical activity, diet and nutrition, sexually transmitted disease, completing school education, crime and violence. These health issues were also mentioned by community members during primary input.
4. CANCER PREVENTION AND SCREENINGS

According to the Centers for Disease Prevention and Control, chronic diseases like cancer are defined broadly as conditions that last 1 year or more and require ongoing medical attention or limit activities of daily living or both. Chronic diseases such as cancer and diabetes are the leading causes of death and disability in the United States and leading drivers of the nation’s $3.3 trillion annual health care costs. Preventing chronic diseases, or managing symptoms when prevention is not possible, can reduce these costs. Chronic diseases like cancer are a factor of old age, meaning the chance of having these conditions increases with age. This has implications for Lake County which has a higher than average median age in comparison to the state and is one of the primary reasons for this topic being prioritized by Hope Rising Lake County. According to the National Cancer Institute, as the population ages, cancer prevalence and the absolute number of people treated for cancer will increase even if cancer incidence rates remain constant or decrease somewhat. Costs are also likely to increase as new, more advanced, and more expensive treatments are adopted as standards of care.

Lake County has the 18th highest rate of invasive cancer cases in the state. Between 2012 and 2016, the population at risk for cancer in the county was 320,379. In Lake County, California from 2012-2016, there were 2,054 new cases of cancer. For every 100,000 people, 410.97 cancer cases were reported. The rate of new invasive cancers is higher for males (448.8 per 100,000 males) than females (419.4 per 100,000 females). The rate of all new cancers is highest in Whites (433.7 per 100,000 people), followed by Blacks (352.6), American Indians/Alaskan Natives (332.2), Asians/Pacific Islanders (313.5) and Hispanics (318.0) (Centers for Disease Control and Prevention, 2012-2016).

Cancer was also the highest cause of mortality in Lake County, as seen in Section 4.8 Health Profile. Over 2012-2016, there were 945 people who died of cancer in the county. For every 100,000 people in Lake County, California, 192.7 per died of cancer compared to 140.2 for the state, conferring the rank of 57th to the county out of 58 counties in the state. The county also was ranked near bottom in the state for deaths by cancers of sites which have gold-standard screening tests that are covered free or at low cost by private and public health plans. Lake County ranked 53rd in deaths by colorectal cancer, 55th in lung cancer deaths, 56th in female breast cancer deaths, and 50th in prostate cancer deaths. The rate of cancer deaths is higher for males (222.5 per 100,000 males) than females (168.4 per 100,000 females). The rate of all new cancers is highest in Blacks (268.9 per 100,000 people), followed by Whites (194.7), American Indians/Alaskan Natives (152.5), and Hispanics (126.7) (Centers for Disease Control and Prevention, 2012-2016) in Lake County. Conduent HCI’s Index of Disparity reports no disparities related to cancer.

An online survey taken by 15 of Hope Rising Lake County’s core stakeholders in April 2019 led to the finalization of criteria that would be used to prioritize health problems. These criteria were:

- Availability and commitment from leadership in the involved organizations
- Expertise and resources within the county to address this health problem
- Opportunities for partnerships that will allow leveraging of shared resources
- Opportunities to address the health problem before it gets exacerbated
- Alignment of problem with your organization’s strengths, priorities, mission

Participants were encouraged to use their own knowledge of their community while scoring. After completing their individual ranking of the ten health needs, participants’ rankings were manually collated, resulting in an aggregate ranking of the health topics. The aggregate ranking can be seen below. After reviewing the below results, participants engaged in a group discussion to narrow the most pressing health needs down to four health needs to consider for subsequent implementation planning. The four top health priorities, presented in no particular order and with equal weightage, were chosen by Hope Rising Lake County.

2019 – 2021 IMPLEMENTATION STRATEGY PLAN

The implementation strategy plan describes how Sutter Lakeside Hospital plans to address significant health needs identified in the 2019 Community Health Needs Assessment and is aligned with the hospital’s charitable mission. The strategy describes:
• Actions the hospital intends to take, including programs and resources it plans to commit;
• Anticipated impacts of these actions and a plan to evaluate impact; and
• Any planned collaboration between the hospital and other organizations in the community to address the significant health needs identified in the 2019 CHNA.

PRIORITIZED SIGNIFICANT HEALTH NEEDS THE HOSPITAL WILL ADDRESS: The Implementation Strategy Plan serves as a foundation for further alignment and connection of other Sutter Lakeside Hospital initiatives that may not be described herein, but which together advance the hospital’s commitment to improving the health of the communities it serves. Each year, programs are evaluated for effectiveness, the need for continuation, discontinuation, or the need for enhancement. Depending on these variables, programs may change to continue focus on the health needs listed below.

1. Address substance/drug abuse within the community
2. Provide community outreach and engagement for all high burden and/or disenfranchised communities
3. Increase opportunities for cancer prevention and screenings

ADDRESS SUBSTANCE/DRUG ABUSE WITHIN THE COMMUNITY

Needs Sutter Lakeside Hospital will not address
No hospital can address all of the health needs present in its community. Sutter Lakeside Hospital is committed to serving the community by adhering to its mission, using its skills and capabilities, and remaining a strong organization so that it can continue to provide a wide range of community benefits. The implementation strategy plan does not include specific plans to address the following significant health needs that were identified in the 2019 Community Health Needs Assessment for the following reasons:

1. Homelessness and Housing Stability:

   Sutter Lakeside Hospital will be actively participating in multiple collaborative to address housing stability and homelessness. We will not be tracking this data as a lead agency in these endeavors. We would like to focus our efforts on substance abuse, community outreach, and cancer prevention.

APPROVAL BY GOVERNING BOARD
The Community Health Needs Assessment and Implementation Strategy Plan was approved by the Sutter Health Bay Hospitals Board on September 24, 2019.
APPENDIX: 2019 COMMUNITY BENEFIT FINANCIALS

Sutter Health hospitals and many other healthcare systems around the country voluntarily subscribe to a common definition of community benefit developed by the Catholic Health Association. Community benefits are programs or activities that provide treatment and/or promote health and healing as a response to community needs.

Community benefit programs include traditional charity care which covers healthcare services provided to persons who meet certain criteria and cannot afford to pay, as well as the unpaid costs of public programs treating Medi-Cal and indigent beneficiaries. Costs are computed based on a relationship of costs to charges. Additional community benefit programs include the cost of other services provided to persons who cannot afford healthcare because of inadequate resources and are uninsured or underinsured, cash donations on behalf of the poor and needy as well as contributions made to community agencies to fund charitable activities, training health professionals, the cost of performing medical research, and other services including health screenings and educating the community with various seminars and classes, and the costs associated with providing free clinics and community services. Sutter Health affiliates provide some or all of these community benefit activities.
Sutter Lakeside Hospital
2019 Total Community Benefit
& Unpaid Costs of Medicare

Financial Assistance (Charity Care) $1,358,424
Government-Sponsored Healthcare (Unpaid Costs of Other Public Programs) $32,733
Other Community Benefits $35,293
Health Professions Education $224,259
Cash and In-Kind Donations $253,982
Community Health Improvement Services $52,291
Subsidized Health Services $9,169,732

$11,126,714 Total Community Benefit 2019

2019 unpaid costs of Medicare were $6,368,430
